3. Template Directory Messages	-	4
4. Document Issue Register Messages	-	5
5. Click Once Deployment Messages	-	7
6. Email Messages	-	7
7. Messages Reference Table	-	8

1. Introduction

This guide documents all system messages and dialogs that may be displayed by the Project Navigator during normal operation. Each message is explained in context, along with its cause and the recommended solution where applicable.

Understanding these messages will help users and administrators quickly identify and resolve common issues without the need for technical support.

2. Project Directory Messages

2.1 Directory Already Exists

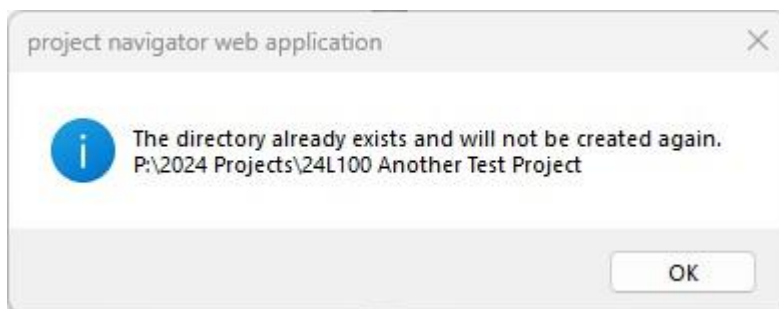

Figure 1

This message is displayed when the project directory already exists on the mapped drive (e.g. P:\OneDrive). The Project Navigator will not attempt to create the directory again. Instead, the project entry as entered in the **Create New Project Entry or Register Existing Project Directory** dialog is simply added to the project table in the projects database.

If the **Document Issue Register** spreadsheet exists in the *Drawings* subdirectory of the existing project directory, it will be updated automatically with the project number and project description as entered in the dialog.

2.2 Directory Created Successfully

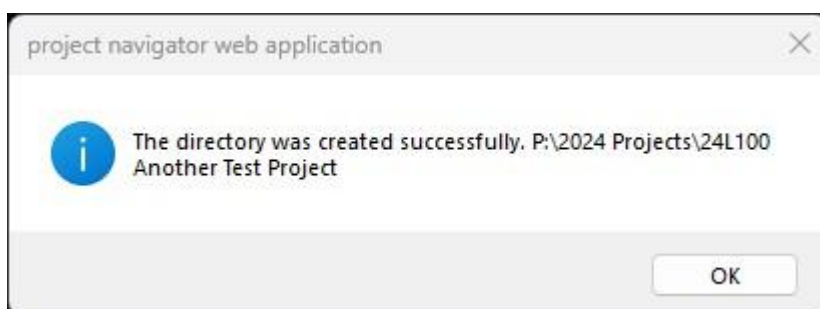

Figure 2

This message is displayed when the project directory does not already exist on the mapped drive. The Project Navigator creates a new project directory and populates it with the contents of the

template directory. The new project entry is also added to the projects table in the projects database.

If the **Document Issue Register** spreadsheet exists in the *Drawings* subdirectory of the newly created project directory, it will be updated automatically with the project number and project description as entered in the dialog.

2.3 Cannot Open Project Directory

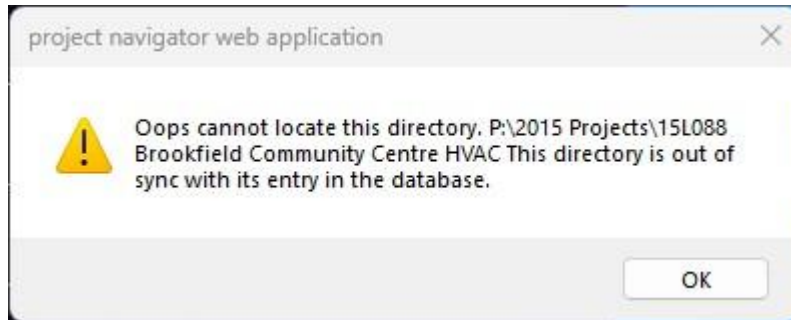

Figure 3

This message is displayed when a user attempts to open a project directory from within the application and the directory cannot be located on the mapped drive. There are several possible causes:

- The project directory has been deleted, renamed, or moved from its expected location on the mapped drive.
- The project directory was created by another user and has not yet synced to the mapped drive on your computer.
- There is a mismatch between the project entry in the projects table in the projects database and the actual directory name on the mapped drive.

3. Template Directory Messages

3.1 Template Directory Not Found

Figure 4

This message is displayed when the template directory cannot be found. The Project Navigator copies the template directory, its subdirectories, and files into every newly created project directory. If the template directory has been deleted, renamed, or moved from its correct location, this operation will fail.

Solution: Ensure the template directory exists at the expected location on the mapped drive. The template directory must be present so that the application knows where to find it when creating new project directories. The templates directory should appear here **P:\2023 Projects\New Project** only. The **New Project** sub directory is the template directory under **P:\2023 Projects** parent directory.

4. Document Issue Register Messages

4.1 Document Issue Register Not Found

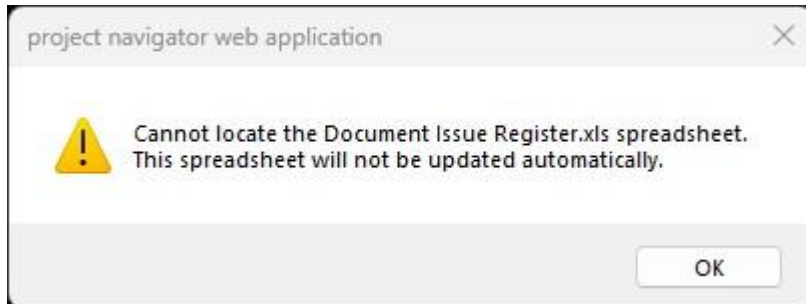

Figure 5

This message is displayed when the **Document Issue Register** spreadsheet cannot be found. The application searches for this file in the *Drawings* subdirectory of the project directory. If the file does not exist when a new project directory is being created or an existing project directory is being registered, this message is displayed.

Solution: For new projects, ensure the Document Issue Register spreadsheet is placed in the *Drawings* subdirectory of the template directory, making it available for all newly created projects. For existing projects, ensure the Document Issue Register spreadsheet is present in the *Drawings* subdirectory of the existing project directory.

4.2 Document Issue Register Is Open in Another Application

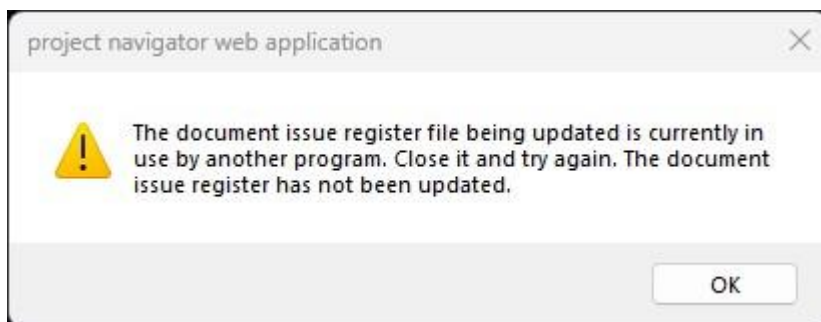

Figure 6

This message is displayed when the **Document Issue Register** spreadsheet is open in another application while the Project Navigator is attempting to update it. If this message appears, the Document Issue Register has not been updated.

Solution: Close the application that has the Document Issue Register open and repeat the steps that generated the message. This typically occurs during the **Register Existing Project Directory** operation.

4.3 Document Issue Register Error Messages

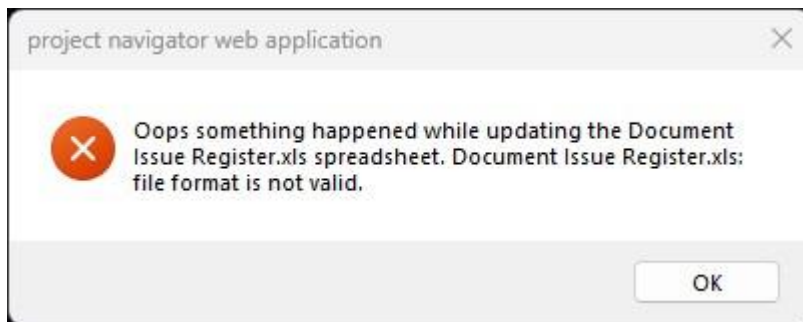

Figure 7

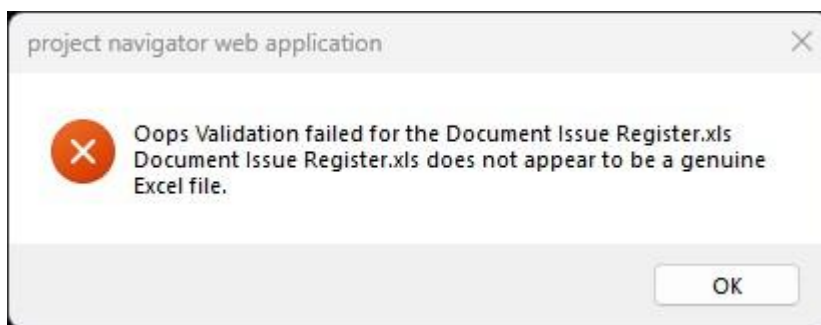

Figure 8

The messages displayed above are when the **Document Issue Register** spreadsheet is not a genuine or valid excel .XLS file.

Solution: For new projects, ensure a genuine or valid Document Issue Register spreadsheet excel .XLS file is placed in the *Drawings* subdirectory of the template directory, making it available for all newly created projects. For existing projects, ensure a genuine or valid Document Issue Register spreadsheet excel .XLSX file is present in the *Drawings* subdirectory of the existing project directory.

5. Click Once Deployment Messages

5.1 Unrecognised Parameter

Figure 9

This message is displayed when an unspecified parameter is passed to the click once deployment application from the Projects Navigator. The click once deployment application supports three parameters only: **Open**, **Create** and **ComposeEmail**,. Any other parameter passed will display this message.

This message should not appear during normal software operation.

6. Email Messages

6.1 Email Client Not Installed

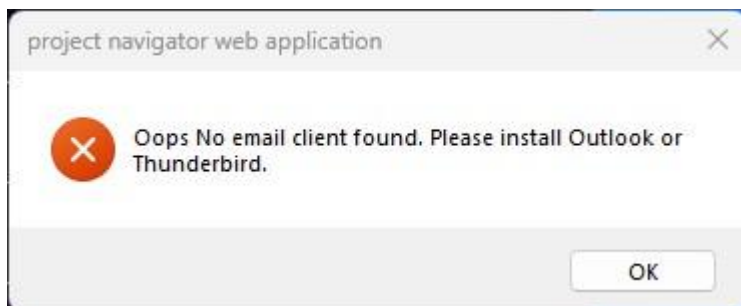

Figure 10

This message is displayed when an email client is not installed on the client computer. Without an email client installed, the Compose Email features of the Project Navigator will not function.

Solution: Ensure that a supported version of Microsoft Office (including Outlook) or Thunderbird or any supported email client is installed on the client computer.

7. Messages Reference Table

The following table provides a quick reference for all system messages documented in this guide.

Message	Cause	Solution
Directory already exists	Project directory found on mapped drive	None required — project entry is registered in the database
Directory created successfully	Project directory did not exist and was created	None required — directory created and entry registered
Cannot open project directory	Directory deleted, renamed, moved, or not yet synced	Verify directory exists on mapped drive; wait for sync if newly created
Template directory not found	Template directory deleted, renamed, or moved	Restore template directory to expected location
Document Issue Register not found	Spreadsheet missing from Drawings subdirectory	Place spreadsheet in Drawings subdirectory
Document Issue Register open in another application	File locked by another application	Close the other application and retry
Unrecognised parameter	Invalid parameter passed to click once deployment	Should not occur during normal operation
Email client not installed	Microsoft Outlook/Thunderbird not found on client computer	Install supported Microsoft Outlook/Thunderbird or similar
