4. View all Projects	-	8
5. Search Projects to Modify	-	8
6. Create New Project Entry or Register Existing Project Directory	-	11
7. Appendix A — Input Validation	-	14

1. Main Menu Options

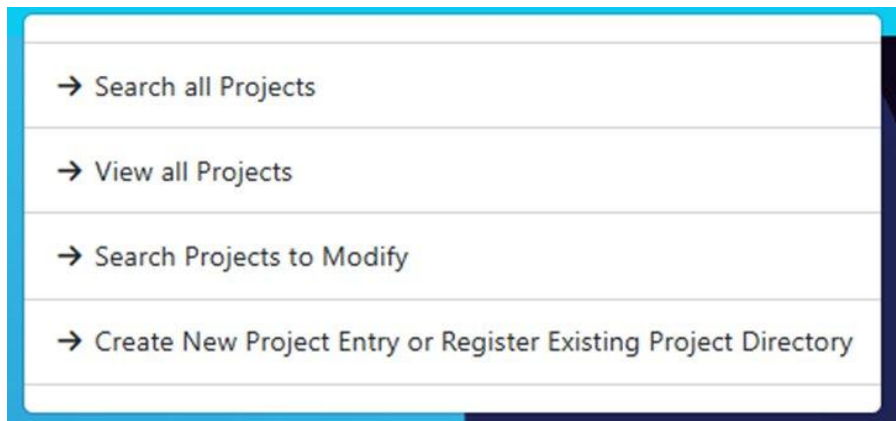

Figure 1

The menu options as shown in fig 1 are the main menu options as supported by the Projects Navigator web application. For the purpose of this operational users guide we'll work through each option starting at Search all Projects and working down.

2. Search all Projects

The **Search all Projects** is the first menu option. This option allows us to search for existing project entries in the projects table in the projects database.

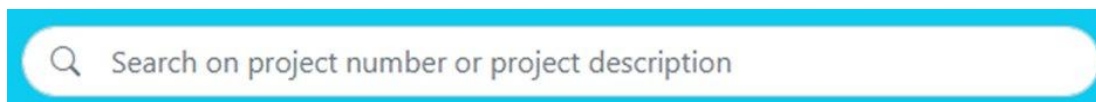

Figure 2

When the Search all Projects menu option is selected, you will see the Search all Projects search input box at the top right of your screen as shown in fig 2.

Here we can enter either a partial or complete project number or partial or complete project description. If we enter **mains** into our Search All Projects input box, entering **mains** would be considered a partial project description entry. This should return the **Lakeview Housing Estate Water Mains** project as shown in fig 3. Alternatively entering **17L441** into our Search All Projects input box as a project number would also return the same result.

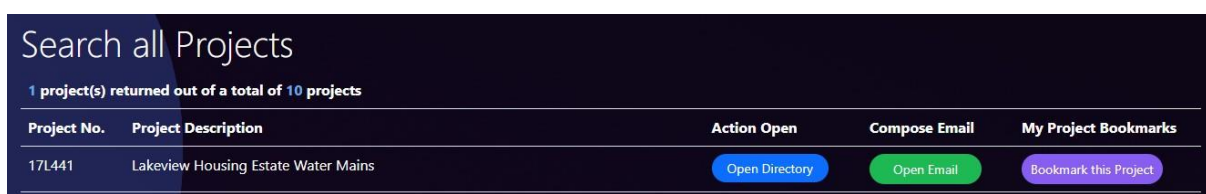

Figure 3

Clicking the Action Open, **Open Directory** button as shown in fig 3 would open the **Lakeview Housing Estate Water Mains** directory on the mapped drive in File Explorer as shown in fig 4.

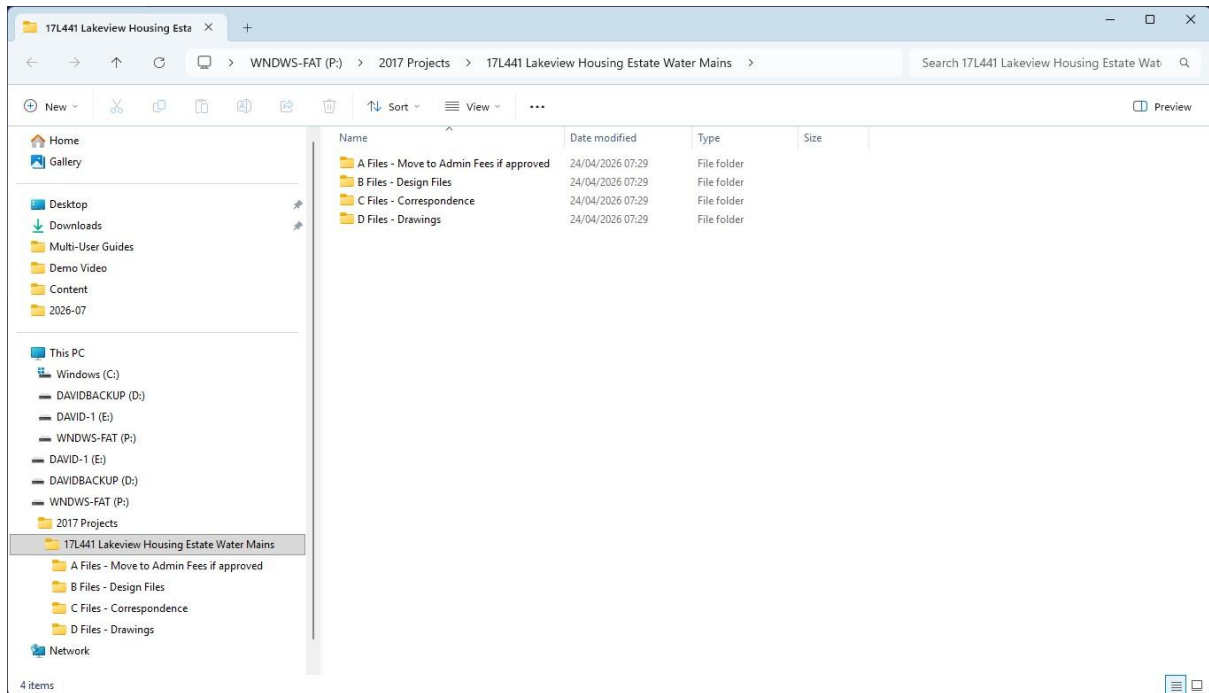

Figure 4

Similarly clicking on the Compose Email, **Open Outlook** button as shown in fig 3 will open your email client giving us a precomposed email. The project number and project description are displayed in the subject line of the email as shown in fig 5.

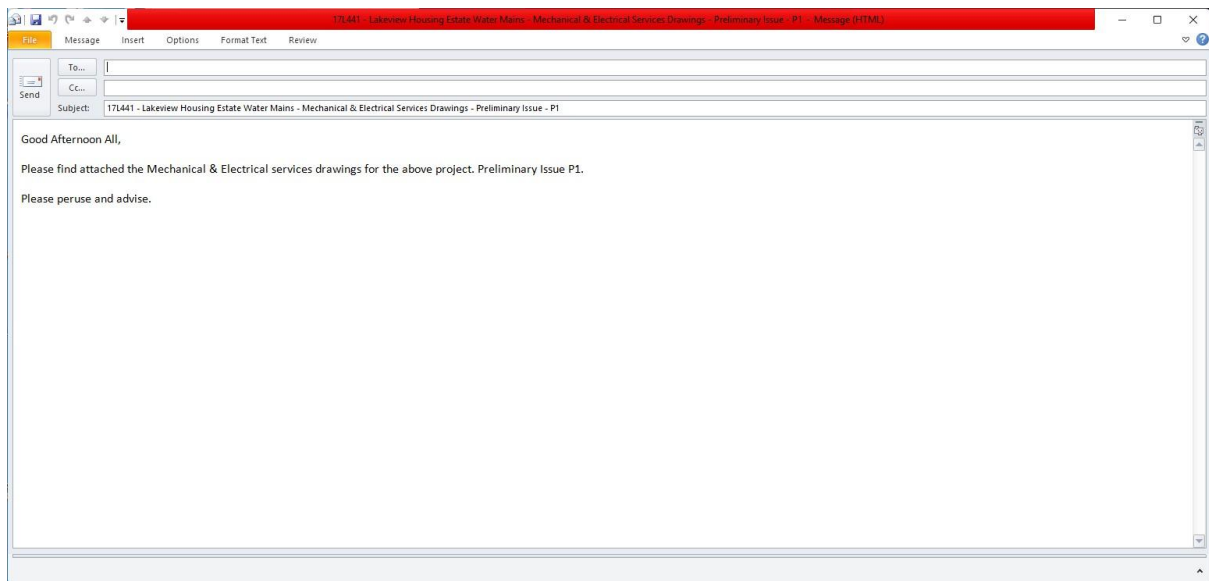

Figure 5

If we enter **18L** into our Search All Projects input box, entering **18L** would be considered a partial project number entry. This should return all projects prefixed with **18L**. All projects are returned in descending order as shown in fig 6. Entering a complete project number like **17L441** would return the **Lakeview Housing Estate Water Mains** project only as shown in fig 3.

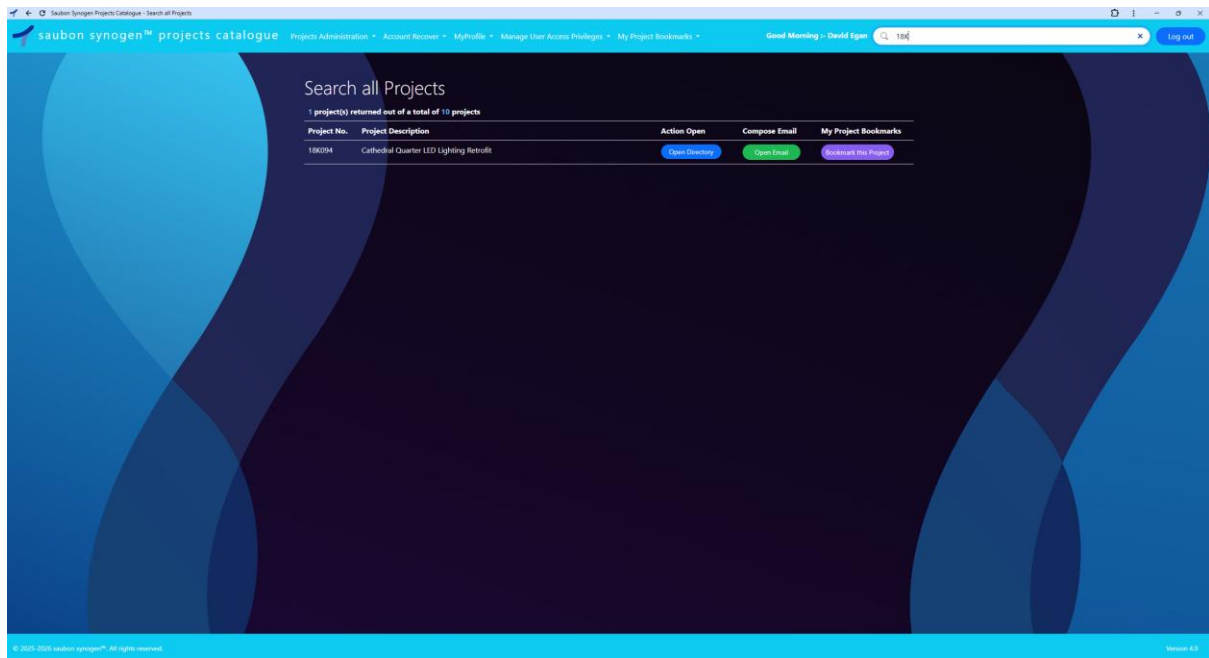

Figure 6

Open Directory on Return

Enter **17L441** in the Search all Projects input box as shown in fig 2 followed by a return. This will automatically open the **Lakeview Housing Estate Water Mains** project directory in File Explorer as shown in fig 4. This quick access approach to opening project directories complements the Action Open, Open Directory button as shown in fig 3.

3. My Project Bookmarks

The Projects Navigator supports project bookmarks. Clicking the **Bookmark this Project** button as shown in fig 3 adds the project bookmark to your My Project Bookmarks dropdown menu. In this case we are bookmarking the **Lakeview Housing Estate Water Mains** project. When you bookmark the project we are notified as shown in fig 7.

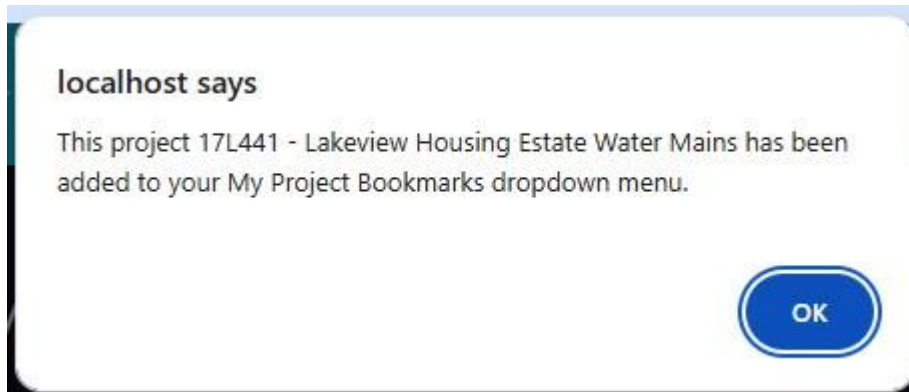

Figure 7

The newly created bookmark can be seen in your My Project Bookmarks dropdown menu as shown in fig 8. Clicking the newly created bookmark from your My Project Bookmarks dropdown menu for the **Lakeview Housing Estate Water Mains** project will navigate you directly to the project as shown in fig 3.

Figure 8

If we click the Bookmark this Project button again as shown in fig 3 for the **Lakeview Housing Estate Water Mains** project, we are notified as shown in fig 9. Only one occurrence of a project can appear in your My Project Bookmarks dropdown menu.

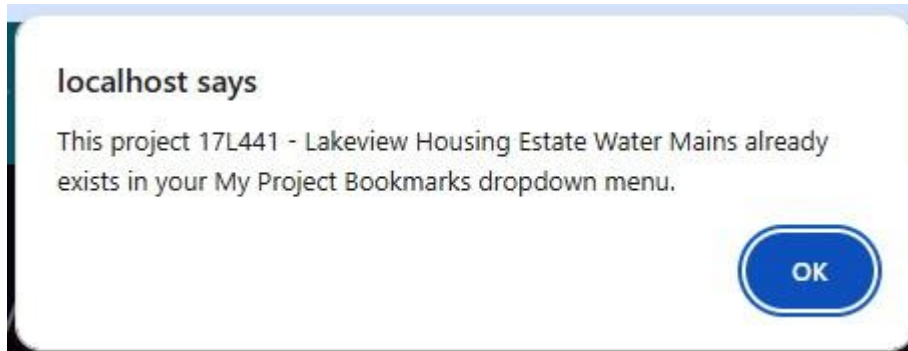

Figure 9

3.1 Deleting all Project Bookmarks

To delete your project bookmarks, simply click the **Delete all Project Bookmarks** menu option from your My Project Bookmarks dropdown menu as shown in fig 8. When we delete all project bookmarks we are notified as follows as shown in the alert fig 10.

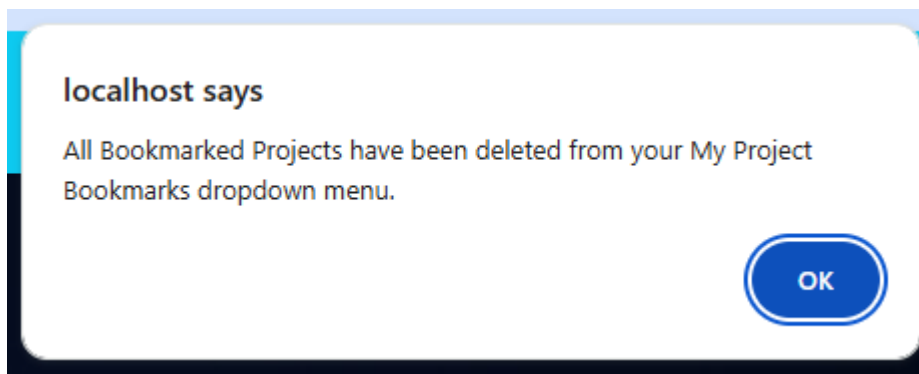

Figure 10

After deleting all your project bookmarks, if you click your My Project Bookmarks dropdown menu again, we are notified of the following as shown in the alert fig 11.

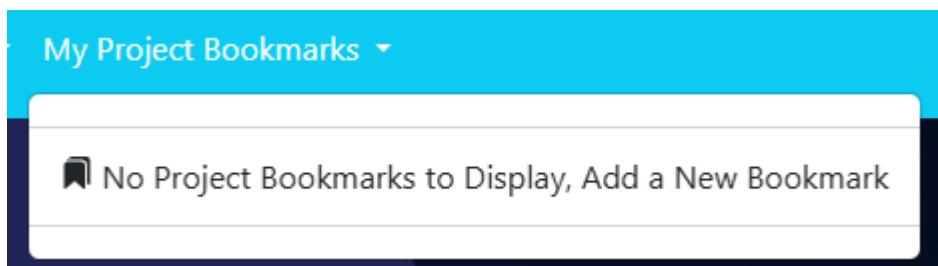

Figure 11

Clicking the **No Project Bookmarks to Display, Add a New Bookmark** menu option notifies you of the following as shown in the alert in fig 12.

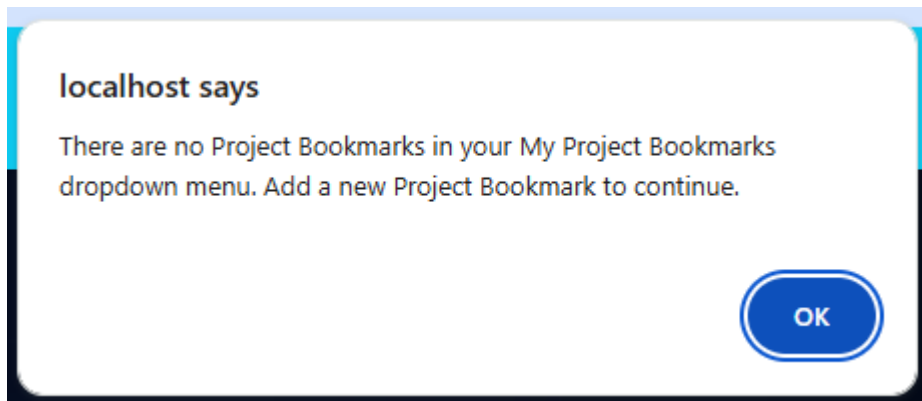

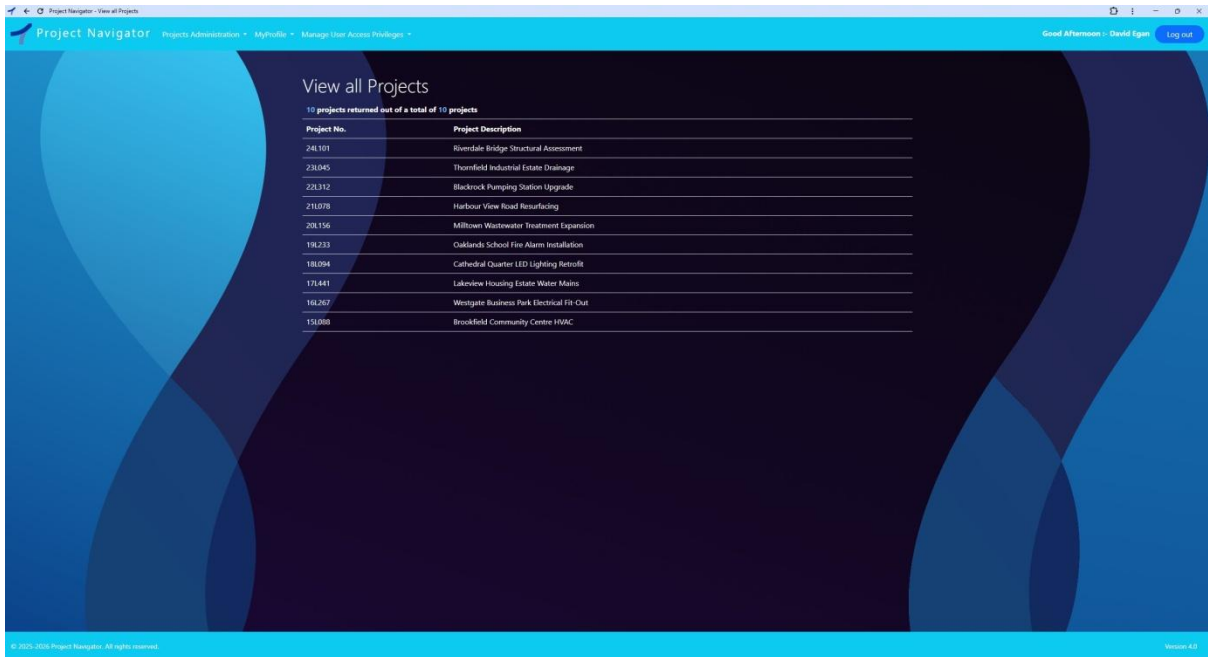

Figure 12

3.2 Removing one project at a time from your My Project Bookmarks dropdown menu

Removing one project from your My Project Bookmarks dropdown menu can be accomplished by moving your cursor over the project you want to delete and simply right clicking the project item. This will remove the project from your My Project Bookmarks dropdown menu.

4. View all Projects

View all Projects is the second menu option. Selecting this option returns all projects as stored in the projects table in the projects database. Projects are returned in descending project number order. The most recent projects are displayed at the top, descending to the older projects down the list. At the time of writing there are 10 demo fictional projects in the projects table in the projects database as shown in fig 13.

Project No.	Project Description
248101	Riverside Bridge Structural Assessment
238045	Thornfield Industrial Estate Drainage
226312	Blackrock Pumping Station Upgrade
211078	Harbour View Road Resurfacing
208156	Milltown Wastewater Treatment Expansion
198233	Oaklands School Fire Alarm Installation
188094	Cathedral Quarter LED Lighting Retrofit
178441	Lakeview Housing Estate Water Mains
168267	Westgate Business Park Electrical Fit-Out
158088	Brookfield Community Centre HVAC

Figure 13

5. Search Projects to Modify

Search Projects to Modify is the third menu option. This option allows us to edit an existing project entry or alternatively delete a project from the projects table in the projects database.

When the Search Projects to Modify menu option is selected, you will see the Search Projects to Modify search input box at the top right of your screen as shown in fig 14.

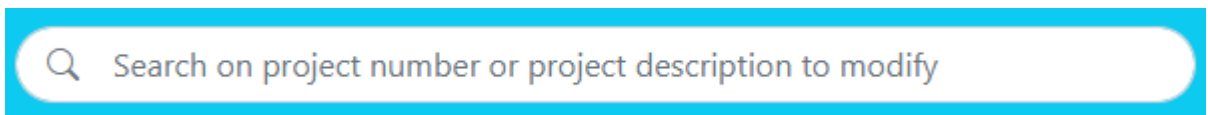

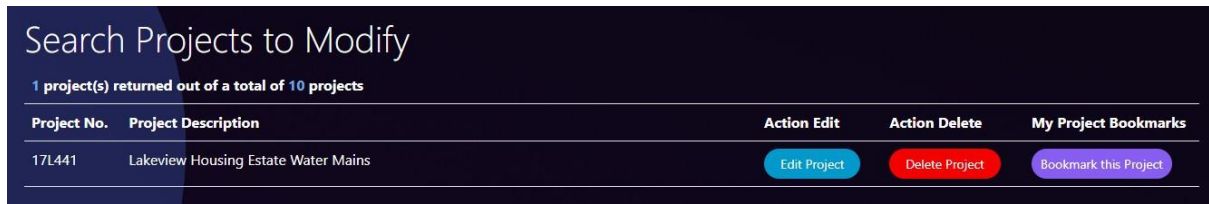

Figure 14

Enter **17K441** into the Search Projects to Modify input box. The **Lakeview Housing Estate Water Mains** project should be returned as shown in fig 15.

Search Projects to Modify			
1 project(s) returned out of a total of 10 projects			
Project No.	Project Description	Action Edit	Action Delete
17L441	Lakeview Housing Estate Water Mains	Edit Project	Delete Project

Figure 15

5.1 Delete Project

We can complete two actions here, edit a project or delete a project. Let's explore the Action Delete, **Delete Project** option as shown in fig 15. Clicking the Delete Project button displays the Delete Project dialog as shown in fig 16.

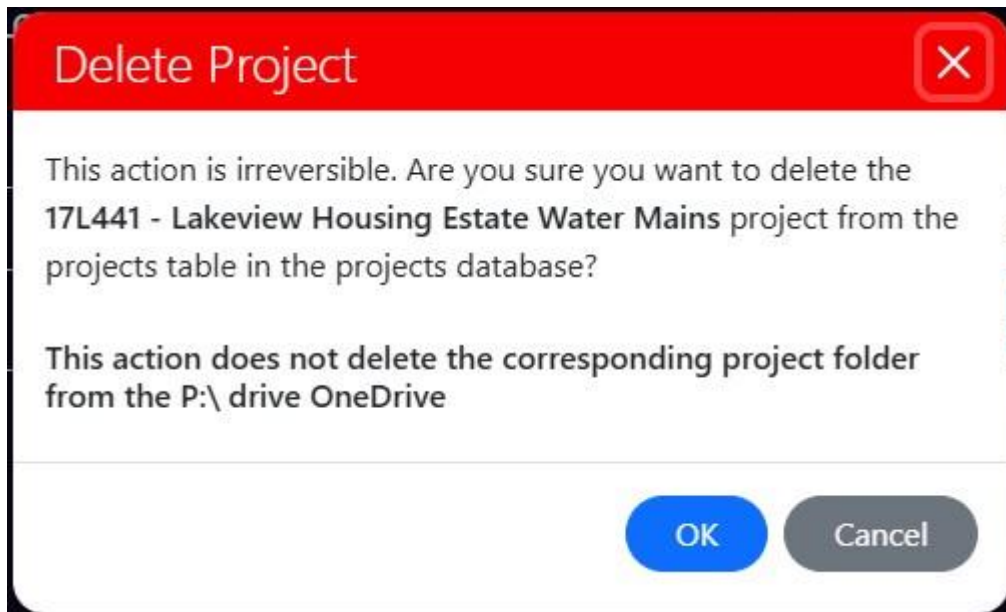

Figure 16

If we click the **OK** button the selected project is deleted from the projects table in the projects database. Similarly, if the Cancel button is clicked the delete action is cancelled. It's worth pointing out that this action does not delete the corresponding project directory from the mapped drive. It only removes the project from the projects table in the projects database. This makes the deleted project inaccessible to all users using the projects navigator application.

5.2 Edit Project

Let's explore the **Edit Project** option as shown in fig 15. Click the Action Edit, Edit Project button as shown in fig 15, which displays the Edit Project dialog as shown in fig 17.

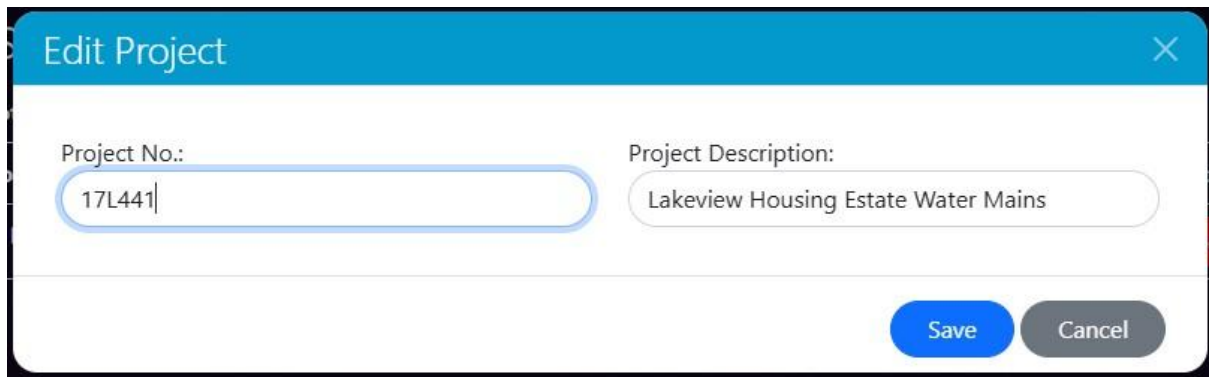

A screenshot of a web application dialog box titled "Edit Project" with a close button (X) in the top right corner. The dialog contains two text input fields. The first field is labeled "Project No.:" and contains the text "17L441". The second field is labeled "Project Description:" and contains the text "Lakeview Housing Estate Water Mains". At the bottom right of the dialog, there are two buttons: a blue "Save" button and a grey "Cancel" button.

Figure 17

Refer to Appendix A for acceptable characters in the project number and project description fields.

In the above example as shown in fig 17 we see **Lakeview Housing Estate Water Mains**. There is a direct correlation here when we combine the project number and project description fields; we actually define the project directory on the mapped drive. Every entry in the projects table in the projects database has a direct correlation with its corresponding directory on the mapped drive.

If we modify either the project number field or project description field and click the Save button our changes are saved into the projects table in the projects database. On the other hand, if we don't make any changes and simply click the Save button, we are notified as shown in fig 18.

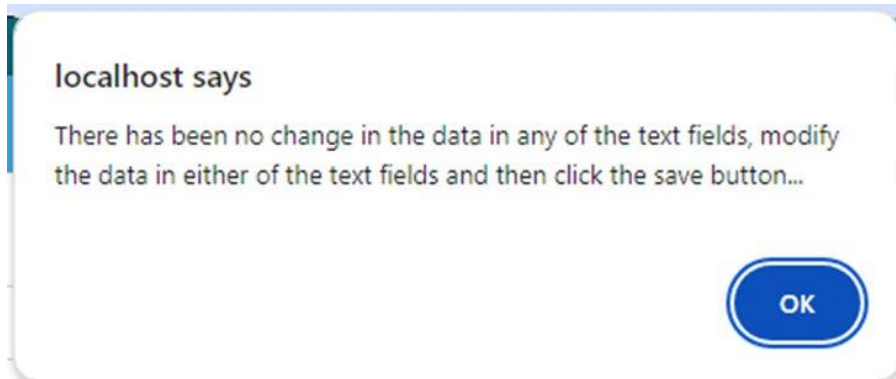

Figure 18

Clicking the **Cancel** button simply cancels any actions. Nothing is saved into the projects table in the projects database.

6. Create New Project or Register Existing Project Directory

The **Create New Project Entry or Register Existing Project Directory** is the fourth and final menu option. This option allows us to create a new project entry or register an existing project directory. The dialog as shown in fig 19 performs two independent actions. The first action is **Create New Project Entry** and the second action is **Register Existing Project Directory**. We'll explore both options below.

6.1 Create New Project Entry

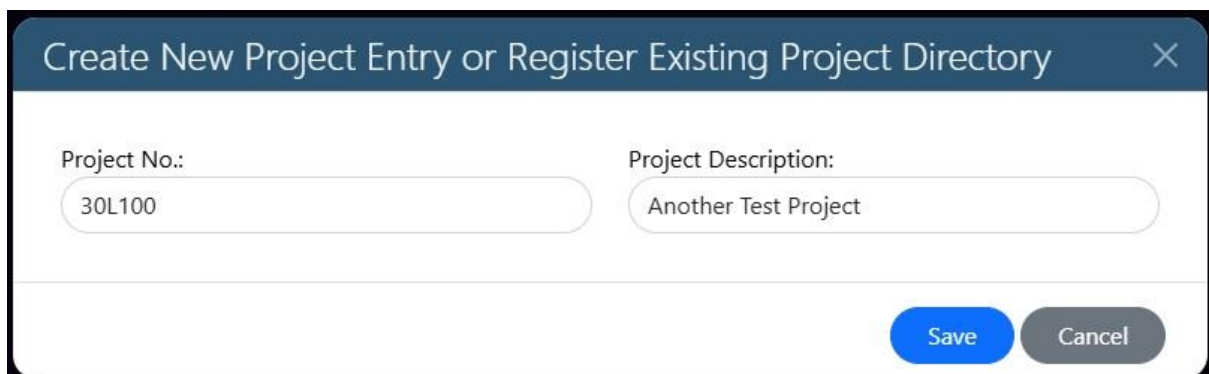

Figure 19

Refer to Appendix A for acceptable characters in the project number and project description fields.

The above example in fig 19 shows a project number **30K100** and project description **Another Test Project**. When the Save button is clicked the application calculates what the project directory will be on the mapped drive based on the project number and project description as entered in the dialog.

When the project directory is calculated, the project directory is checked to see if it exists on the mapped drive. If the project directory does not exist, a new project directory will be created and the project entry is added to the projects table in the projects database. When the directory is created successfully, the application notifies the user accordingly as shown in fig 20.

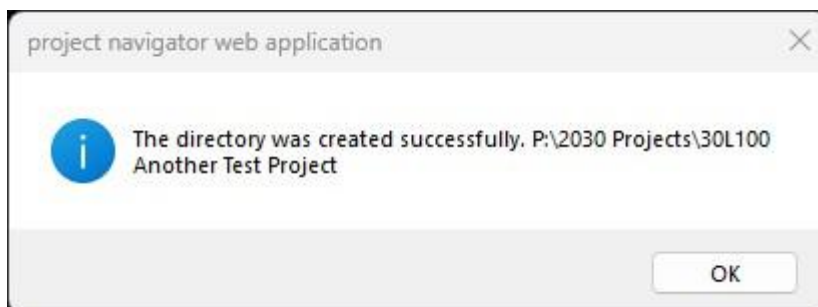

Figure 20

The directory as defined above is created automatically and will be populated with the contents of the template directory. The template directory is a set of predefined directories and files which are used as a template for all new project directories created on the mapped drive.

If the Document Issue Register spreadsheet exists in the Drawings directory of the newly created project directory, it will be automatically updated and display the project number and project description as entered in the dialog. The updated spreadsheet can be seen in fig 22.

As the creator of the new project, you should be able to open the directory instantly from within the application. It's worth noting that others won't be able to open the directory until the new project directory on the mapped drive syncs on all the other computers. If another user tries to access the new project directory before it has synced on their computer they will be greeted with the dialog as shown in fig 21.

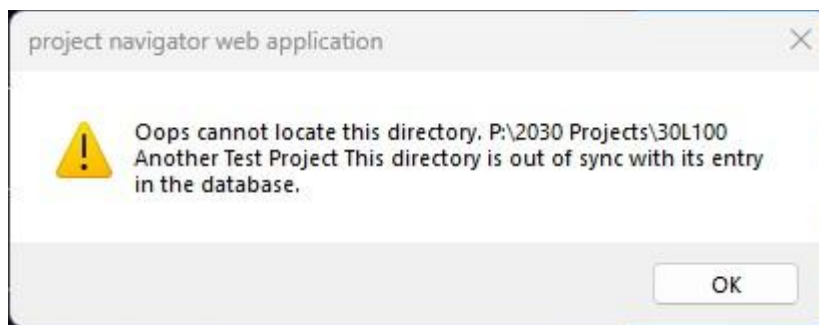

Figure 21

File		Home		Insert		Page Layout		Formulas		Data		Review		View	
B9				fx											
	A	B	C				D								
1	DR														
2	Project No.		30L100												
3	Project Name		Another Test Project												
4															
5	Drg No.		Drawing / Document Name												
6															
7															

Figure 22

To recap on the four actions carried out when creating a new project entry:

- The project directory is created on the mapped drive if it does not exist.
- The contents of the template directory are copied into the new project directory.
- The new project entry is added to the projects table in the projects database.
- The Document Issue Register spreadsheet is automatically updated if it exists in the Drawings directory of the newly created project directory.

6.2 Register Existing Project Directory

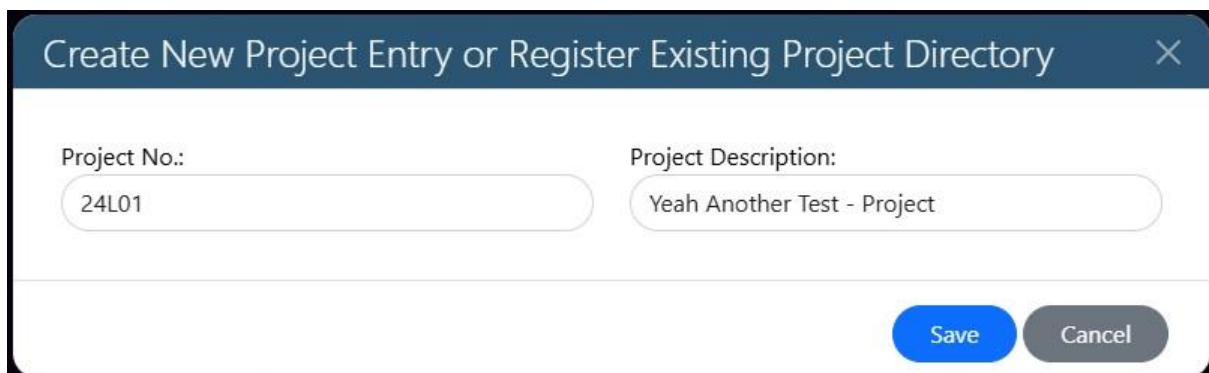

Figure 23

Refer to Appendix A for acceptable characters in the project number and project description fields.

The above example in fig 23 shows a project number **24K01** and project description **Yeah Another Test - Project**. The difference here is this project exists as a project directory on the mapped drive. The project does not exist as yet in the projects table in the projects database.

When the Save button is clicked the application calculates what the project directory will be on the mapped drive. When the project directory is calculated, the project directory is checked to see if it exists. In this case the project directory does exist and the application notifies the user accordingly as shown in fig 24.

Figure 24

The project is added to the projects table in the projects database. If the Document Issue Register spread sheet exists in the Drawings directory of the existing project directory, it will be automatically updated. Unlike creating a new project entry, the contents of the template directory are not copied into the existing project directory.

To recap on the three actions carried out when registering an existing project directory:

- The project directory is checked on the mapped drive to see if it exists.
- The project entry is added to the projects table in the projects database.
- The Document Issue Register spread sheet is automatically updated if it exists in the Drawings directory of the existing project directory.

7. Appendix A — Input Validation

7.1 Project Number Format

The project number must comply with the format **##L###**. If the project number is not formatted correctly the application will notify the user accordingly. The first two digits represent the year. The L represents the Limerick Office and the final digits are the project number. The project number usually follows a numerical sequential sequence. Examples of valid project numbers: **22L01**, **23L90**, **30L100**.

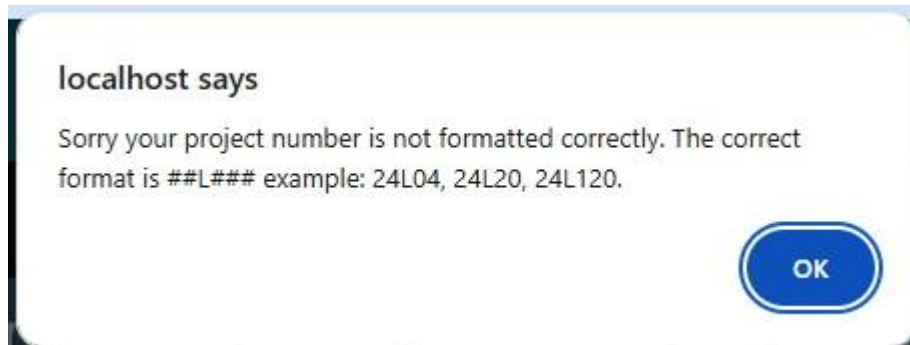

Figure 25

7.2 Project Description Characters

The project description field can be defined with the following characters: **[a-z-A-Z-0-9] ^&'@{}[],\$=!-#()%+.~_£€;`~|**

The project description field should not include the following characters as directory names cannot contain them: **\:"?<>|/**

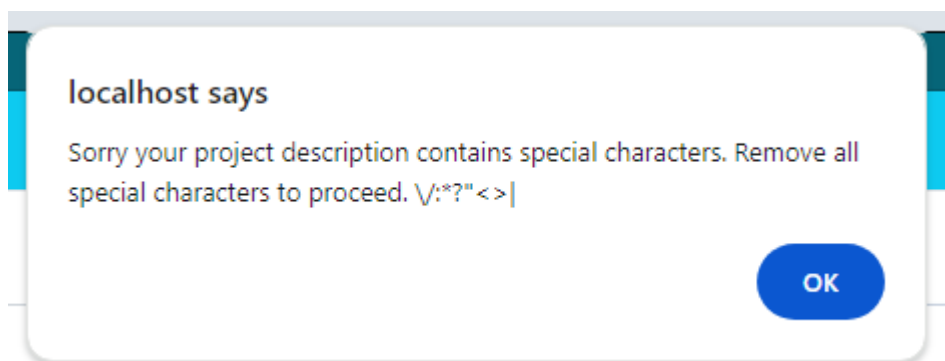

Figure 26

If a non-permitted character is entered into the project description field the application will notify the user accordingly as shown in fig 26.

Refer to fig 27 for a comprehensive list of acceptable and non-acceptable characters to be used in the project description field as supported by the projects navigator web application.

ANSWER

A filename cannot contain any of the following characters:

\ / : * ? " ' < > |

Characters that are valid for naming files, folders, or shortcuts include any combination of letters (A-Z) and numbers (0-9), plus the following special characters:

- ^ Accent circumflex (caret)
- & Ampersand
- ' Apostrophe (single quotation mark)
- @ At sign
- { Brace left
- } Brace right
- [Bracket opening
-] Bracket closing
- , Comma
- \$ Dollar sign
- = Equal sign
- ! Exclamation point
- - Hyphen
- # Number sign
- (Parenthesis opening
-) Parenthesis closing
- % Percent
- . Period
- + Plus
- ~ Tilde
- _ Underscore

Unicode is not supported.

For more information regarding file-naming conventions, refer to the Microsoft Windows Developer Network article [Naming a File](#) and the Microsoft TechNet article [How NTFS Works](#).
