4. Understanding the User Privileges Table
5. Editing User Access Privileges
6. Deleting a User Account
7. Privilege Descriptions

1. Introduction

This guide provides step-by-step instructions for system administrators to manage user accounts and access privileges within the Saubon Synogen™ Projects Catalogue. It covers searching for users, modifying their permissions, and deleting user accounts.

The application uses a granular user based permissions system that allows administrators to grant or revoke specific privileges on a per-user basis. This ensures that each team member has access only to the features they need, maintaining security and operational integrity across the organisation.

Only users with the **I'm an Administrator** privilege enabled can access the administration features described in this guide.

2. Accessing User Administration

To access the user administration area, follow these steps:

1. Log in to the Saubon Synogen™ Projects Catalogue with an administrator account.
2. From the top navigation bar, click on **Manage User Access Privileges**.
3. The **Search Users to Modify Access Privileges** page will load, displaying all registered users.

The search bar at the top right of the page allows you to filter users by username, full name, or job title.

3. Search Users to Modify Access Privileges

The main administration screen displays a table listing all registered users and their current privilege settings. The page header shows the number of users returned from a search along with the total number of registered users (e.g. *13 user(s) returned out of a total of 13 users*).

Each row in the table represents a single user account and displays the following information:

Column	Description
Username	The unique login identifier for the user (e.g. A1039260). Usernames consist of capital letters and numbers only.
Users Full Name	The full name of the user as registered in the system.
Job Title	The job title or role of the user within the organisation.
User Email	The work email address associated with the user account.

Each row also includes a series of checkboxes indicating the current privilege status, along with two action buttons: **Edit User** and **Delete User**.

4. Understanding the User Privileges Table

The privileges table displays a checkbox for each permission assigned to a user. A ticked checkbox indicates the privilege is granted; an unticked checkbox indicates the privilege is revoked. The following privileges are displayed as columns in the table:

Privilege	Description
Open Directories	Allows the user to open project directories directly from the browser to the file system via the Open Directory button.
Compose Email	Allows the user to compose and send emails related to a project using the Open Email button.
Edit Project	Allows the user to modify project details such as project number and description.
Delete Project	Allows the user to permanently remove a project entry from the catalogue. This action is irreversible.
Create Bookmarks	Allows the user to bookmark projects for quick access via the My Project Bookmarks menu.
Create Project Directories	Allows the user to create new project entries or register existing project directories in the catalogue.
EditMyProfile	Allows the user to edit their own profile information including name, job title, and email address.
I'm an Administrator	Grants full administrative access, including the ability to manage other users' accounts and privileges.
Deny Login Access	When enabled, this blocks the user from logging in to the application. Use this to temporarily suspend an account without deleting it.

5. Editing User Access Privileges

To modify a user's permissions, click the **Edit User** button on the corresponding row in the user table. This opens the **Edit User Access Privileges** dialog fig1 below.

Edit User Access Privileges :- David Egan

Username: DEGAN01 Users Full Name: David Egan

Job Title: Senior CAD Technician

— **Search all Projects Privileges** —

☒ Grant/Revoke Open Directory Privileges ☒ Grant/Revoke Compose Email Privileges

— **Search Projects to Modify Privileges** —

☒ Grant/Revoke Edit Project Privileges ☒ Grant/Revoke Delete Project Privileges

— **Search all Projects Privileges & Search Projects to Modify Privileges** —

☒ Grant/Revoke Create Bookmark Privileges

— **Create New Project Entry or Register Existing Project Directory / EditMyProfile Privileges** —

☒ Grant/Revoke Create Project Directory Privileges ☒ Grant/Revoke EditMyProfile Privileges

— **System Administrative Privileges** —

☒ Grant/Revoke System Admin Privileges ☒ Grant/Revoke Login Access Privileges

Changes made in this dialog will take effect the next time the user logs in

Save **Cancel**

Figure 1

5.1 Dialog Overview

The dialog displays the user's read-only identification details at the top: Username, Users Full Name, and Job Title. These fields cannot be modified from this screen.

Below the identification fields, the privileges are organised into the following categories:

Search all Projects Privileges

- **Grant/Revoke Open Directory Privileges** — controls whether the user can open project directories from search results.
- **Grant/Revoke Compose Email Privileges** — controls whether the user can compose emails from search results.

Search Projects to Modify Privileges

- **Grant/Revoke Edit Project Privileges** — controls whether the user can edit project entries.
- **Grant/Revoke Delete Project Privileges** — controls whether the user can delete project entries.

Search all Projects Privileges & Search Projects to Modify Privileges

- **Grant/Revoke Create Bookmark Privileges** — controls whether the user can bookmark projects for quick access.

Create New Project Entry or Register Existing Project Directory / EditMyProfile Privileges

- **Grant/Revoke Create Project Directory Privileges** — controls whether the user can create new project entries or register existing directories.
- **Grant/Revoke EditMyProfile Privileges** — controls whether the user can edit their own profile details.

System Administrative Privileges

- **Grant/Revoke System Admin Privileges** — grants or removes full administrator access for the user.
- **Grant/Revoke Login Access Privileges** — enables or disables the user's ability to log in to the application.

5.2 Saving Changes

After making the desired changes to a user's privileges, click the **Save** button to apply the changes. Click **Cancel** to discard any changes and return to the user table.

Important: Changes made in this dialog will take effect the next time the user logs in. If the user is currently logged in, they will continue to operate under their existing privileges until their next session.

6. Deleting a User Account

To delete a user account, click the **Delete User** button on the corresponding row in the user table.

A confirmation dialog will appear with the message: *This action is irreversible. Are you sure you want to delete [User Name] from the users accounts table?*

- Click **OK** to permanently delete the user account.
- Click **Cancel** to abort the deletion and return to the user table.

Warning: This action is irreversible. Once a user account is deleted, it cannot be recovered. All privilege settings associated with the account will be permanently removed. If you wish to temporarily prevent a user from accessing the system without deleting their account, consider using the **Deny Login Access** privilege instead.

7. Privilege Descriptions

The following table summarises all available privileges and their recommended assignment based on common user roles within an engineering organisation.

Privilege	Standard User	Project Lead	Director	Administrator
Open Directories	✓	✓	✓	✓
Compose Email	✓	✓	✓	✓
Edit Project	—	✓	✓	✓
Delete Project	—	—	✓	✓
Create Bookmarks	✓	✓	✓	✓
Create Project Directories	—	✓	✓	✓
EditMyProfile	✓	✓	✓	✓
I'm an Administrator	—	—	—	✓
Deny Login Access	—	—	—	—

Note: The role-based privilege recommendations above are guidelines. Administrators should tailor permissions to their organisation's specific requirements and security policies.
