Does Your Company's Projects Directory Structure Align with the Saubon Synogen™ Web Application Workflow?

The Saubon Synogen™ Multi-User Projects Catalogue is not a one-size-fits-all solution. Every company has its own directory file structure system, and the application would need to be reprogrammed to accommodate your specific format. Project directory structure is equally important and must align with how your company organises its work on disk. A typical structure in the AEC (Architectural, Engineering & Construction) industry might look like this:

2026 Projects

- 26G001 — The First Project
- 26G002 — The Second Project
- 26G003 — The Third Project
- 26G010 — The Tenth Project
- 26G100 — The Hundredth Project

However, the letter prefix in the project number may not be standard in your company. Another organisation might use a simpler numbering convention:

2025 Projects

- 2501 — The First Project
- 2502 — The Second Project
- 2503 — The Third Project
- 2510 — The Tenth Project
- 25100 — The Hundredth Project

2026 Projects

- 2601 — The First Project
- 2602 — The Second Project
- 2603 — The Third Project
- 2610 — The Tenth Project
- 26100 — The Hundredth Project

This directory structure, or minor variants as defined above, is key and is critical to integrating the Saubon Synogen™ Multi-User Projects Catalogue into your workflow. It may be that your company's directory structure does not comply with the above naming convention. If not, renaming your project directories to comply may be the only option if you want the Saubon Synogen™ Multi-User Projects Catalogue to manage them for you. Not a light undertaking if you have thousands of existing project directories to rename. The Saubon Synogen™ Multi-User Projects Catalogue displays your projects in project number descending order. The most recent project numbers are at the top and the older project numbers appearing down the list. I can assist with the population of your existing projects into the application — the real value of the platform is realised when all of your projects are installed. At that point the tool becomes invaluable to everyone who uses it: CEOs, Managing Directors, Engineers, BIM Managers, CAD Technicians, and Administration Staff — essentially anyone who needs to find and access centralised project directories quickly.

In Image 2 of the application screenshots, you will see the Open Directory button. When a user clicks this button, the project directory — whether it resides on the file server in your office or on

OneDrive — opens directly in File Explorer, giving instant access to all project files without navigating through directory hierarchies manually.

No longer is finding a project an arduous or time-consuming task — and no longer is it a hit-and-miss exercise. With the Saubon Synogen™ Multi-User Projects Catalogue, any project in the system can be found in seconds. No guesswork, no wasted time, no hit or miss to it. If a project isn't in the system, it can't be found.
