Account Recovery

The Saubon Synogen™ Projects Catalogue provides three account recovery options accessible from the landing page. These allow users to retrieve a forgotten username, reset a forgotten password, or retrieve a forgotten email address. In each case, the system delivers a response via email to the registered work email address associated with the account.

Retrieve Your Username

If you have forgotten your username, click the **Forgot your Username** link on the landing page. The **Retrieve your saubon synogen™ projects catalogue username** dialog as shown in fig 1 will be displayed.

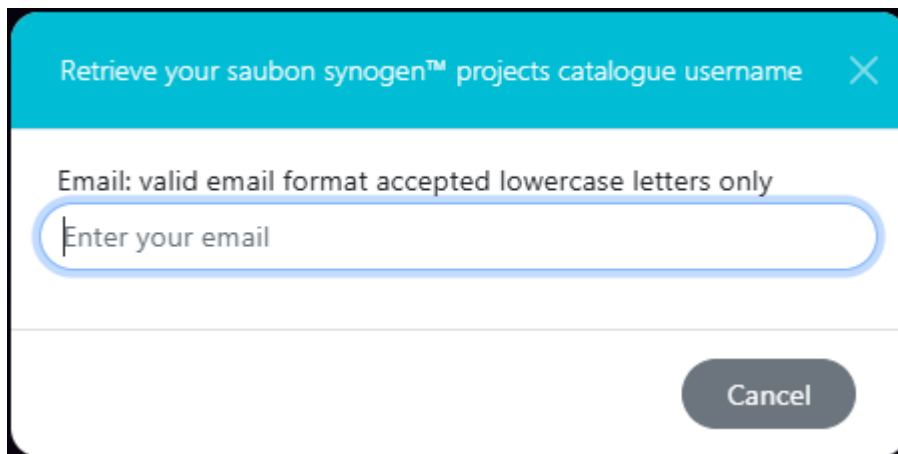

Figure 1

Enter your registered work email address in the email field. The email must be in a valid email format and in lowercase letters only. When submitted, the system will look up the email address in the user accounts table. If a matching account is found, an email is delivered to that address containing your username.

If the email address does not exist in the user accounts table, the system will notify you that no matching account was found. Click **Cancel** or the **X** button to close the dialog and return to the landing page.

Reset Your Password

If you have forgotten your password, click the **Forgot your Password** link on the landing page. The **Reset your saubon synogen™ projects catalogue password** dialog as shown in fig 2 will be displayed.

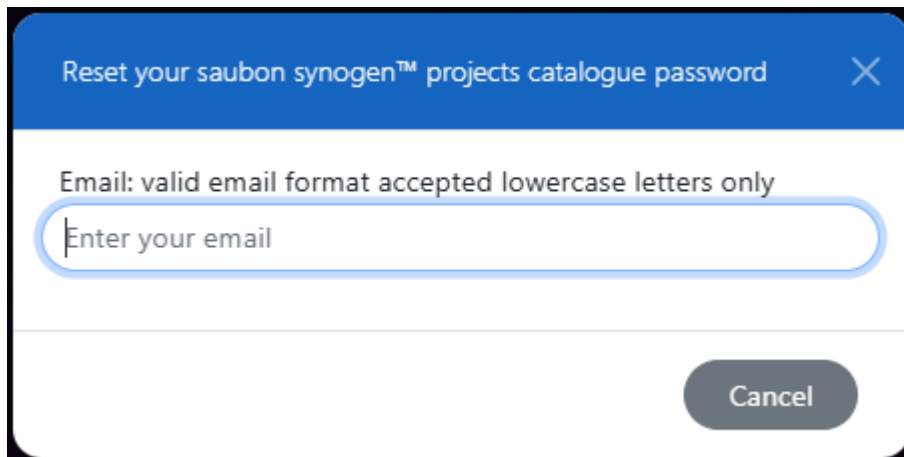

A dialog box titled "Reset your saubon synogen™ projects catalogue password" with a close button (X) in the top right corner. Below the title bar, there is a text label "Email: valid email format accepted lowercase letters only" above a text input field containing the placeholder "Enter your email". At the bottom right of the dialog is a "Cancel" button.

Figure 2

Enter your registered work email address in the email field. The email must be in a valid email format and in lowercase letters only. When submitted, the system will look up the email address in the user accounts table. If a matching account is found, an email is delivered to that address containing a secure change password link.

When you receive the email, click the change password link provided. This will open the change password dialog directly in your browser, where you can enter and confirm your new password. Once saved, your new password takes effect immediately and your previous password will no longer work.

If the email address does not exist in the user accounts table, the system will notify you that no matching account was found. Click **Cancel** or the **X** button to close the dialog and return to the landing page.

Retrieve Your Email Address

If you have forgotten the email address associated with your account, click the **Forgot your Email** link and then select the option to retrieve your email. The **Retrieve your saubon synogen™ projects catalogue email** dialog as shown in fig 3 will be displayed.

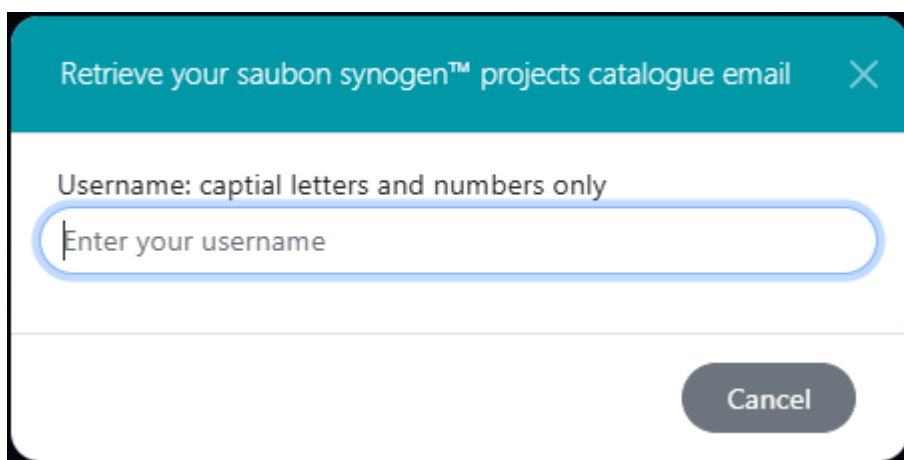

A dialog box titled "Retrieve your saubon synogen™ projects catalogue email" with a close button (X) in the top right corner. Below the title bar, there is a text label "Username: captial letters and numbers only" above a text input field containing the placeholder "Enter your username". At the bottom right of the dialog is a "Cancel" button.

Figure 3

Enter your username in the username field. Usernames consist of capital letters and numbers only. When submitted, the system will look up the username in the user accounts table. If a matching account is found, an email is delivered to the registered work email address associated with that account, confirming the email address on file.

If the username does not exist in the user accounts table, the system will notify you that no matching account was found. Click **Cancel** or the **X** button to close the dialog and return to the landing page.

Email Delivery

All three account recovery options deliver their response via email to the registered work email address associated with the user account. If you do not receive the email, check your spam or junk folder. If the issue persists, contact your system administrator for assistance.

Note: Account recovery emails are sent to the work email address stored in the user accounts table at the time of the request. If your email address has changed and has not been updated in the system, you will not receive the recovery email. The user can change their email in their MyProfile.
