MyProfile User Guide

May 2026

By David Egan

**Software
Version 4.0**

Editing Your Profile

The **MyProfile** feature allows users to update their own account details. To access this feature, click the **MyProfile** menu option from the top navigation bar. The **View MyProfile to Modify** dialog as shown in fig 1 will be displayed, pre-populated with your current account information.

Note: This feature is only available to users who have been granted the **MyProfile** privilege by an administrator.

Profile Fields

The following fields can be modified from the View MyProfile to Modify dialog:

- **Username:** Your unique login identifier, consisting of capital letters and numbers only (e.g. DEGAN01). You may change your username, however the system will automatically check that the new username does not already exist in the user accounts table. If the username you enter is already taken by another user, the change will be rejected and you'll be notified accordingly.
- **Password:** Enter a new password to change your current password. All passwords are encrypted and are case sensitive. Leave this field blank if you do not wish to change your password.
- **Confirm Password:** Re-enter the new password to confirm. The system will verify that both password fields match before the change can proceed. Click the eye icon to the right of either password field to toggle password visibility.
- **Christian Name:** Your first name.
- **Full Name:** Your full name as it appears throughout the application and in the user accounts table, used in the personalised greeting displayed after login.
- **Job Title:** Your job title or role within the organisation.
- **Work Email:** Your work email address. You may change your email address, however the system will automatically check that the new email address does not already exist in the user accounts table. If the email address you enter is already associated with another user account, the change will be rejected and you will be notified accordingly. Each user account must have a unique email address.

Uniqueness Validation

The system enforces uniqueness on two critical fields to prevent profile account conflicts and ensure data integrity:

- **Username** — every username must be unique across the entire user accounts table. The system automatically checks for an existing username as you enter it. If the username already exists, you are notified immediately and updating your profile cannot proceed until a unique username is provided.
- **Work Email** — every email address must be unique across the entire user accounts table. The system automatically checks for an existing email address as you enter it. If the email address already exists, you are notified immediately and updating your profile cannot proceed until a unique email address is provided.

These checks run automatically as you enter data, preventing the creation of duplicate user accounts and ensuring that each user can be uniquely identified by both their username and email address.

Saving Changes

After making the desired changes, click the **Save** button to apply your updates. Click **Cancel** to discard any changes and return to the application. Click the **X** button in the top right corner to close the dialog.

Important: Password changes will take effect the next time the user logs in. If you change your password, you will continue to use your current password for the remainder of your current session. Your new password will be required at your next login
