**Software
Version 4.0**

Registering a New User

To register a new user, click the **Register New User** button on the landing page. The registration form as shown in fig 1 will be displayed.

The registration form is titled "Registration form for new saubon synogen™ projects catalogue user" and includes a close button (X) in the top right corner. It contains the following fields:

- Username:** captil letters and numbers only. The input field contains the placeholder text "Username".
- Password:** passwords are encrypted, all passwords are case sensitive. The input field contains the placeholder text "Password" and has a toggle icon for password visibility.
- Confirm Password:** The input field contains the placeholder text "Confirm Password" and has a toggle icon for password visibility.
- Christian Name:** The input field contains the placeholder text "Christian Name".
- Full Name:** The input field contains the placeholder text "Full Name".
- Job Title:** The input field contains the placeholder text "Job Title".
- Work Email:** The input field contains the placeholder text "Work Email".

At the bottom right of the form, there are two buttons: "Save" (blue) and "Cancel" (grey).

Figure 1

Complete all fields in the registration form as described below.

Registration Fields

- **Username:** Enter a unique username consisting of capital letters and numbers only (e.g. DEGAN01). The system automatically checks that the username does not already exist in the user accounts table as you enter it. If the username is already taken by another user, you will be notified immediately.
- **Password:** Enter a password. All passwords are encrypted and are case sensitive. Choose a strong password that is not easily guessed.
- **Confirm Password:** Re-enter the same password to confirm. The system will verify that both password fields match before the registration can proceed. Click the eye icon to the right of either password field to toggle password visibility.
- **Christian Name:** Enter the user's first name.
- **Full Name:** Enter the user's full name as it should appear in the user accounts table and throughout the application. This is used in the personalised greeting displayed after login (e.g. *Good Morning :- David Egan*).
- **Job Title:** Enter the user's job title or role within the organisation (e.g. Senior CAD Technician, Building Services Engineer, Secretary).
- **Work Email:** Enter the user's work email address. The system automatically checks that the email address does not already exist in the user accounts table as you enter it. If the email address is already associated with another user account, you will be notified immediately. Each user account must have a unique email address.

Uniqueness Validation

The system enforces uniqueness on two critical fields to prevent duplicate accounts and ensure data integrity:

- **Username** — every username must be unique across the entire user accounts table. The system automatically checks for an existing username as you enter it. If the username already exists, you are notified immediately and the registration cannot proceed until a unique username is provided.
- **Work Email** — every email address must be unique across the entire user accounts table. The system automatically checks for an existing email address as you enter it. If the email address already exists, you are notified immediately and the registration cannot proceed until a unique email address is provided.

These checks run automatically as you enter data, preventing the creation of duplicate user accounts and ensuring that each registered user can be uniquely identified by both their username and email address.

Completing Registration

When all fields are completed, click the **Save** button to create the new user account. The system will verify that both password fields match and that all required fields are completed. Since the username and email address have already been validated for uniqueness as you entered them, the account is created in the user accounts table and the user can log in immediately.

Click **Cancel** to discard the registration and return to the landing page. Click the **X** button in the top right corner to close the dialog.

Default Privileges

Newly registered users are created with a default set of privileges. An administrator can subsequently modify these privileges using the **Edit User Access Privileges** dialog. Refer to the Administration Guide for full details on managing user privileges. The permissions as defined below are revoked on all new user accounts.

Revoked	Permission
✓	Create Project Directory Privileges
✓	Edit Project Privileges
✓	Delete Project Privileges
✓	System Admin Privileges

The Projects Catalogue system administrator can assign permissions to users on an individual basis, as outlined in the table above. In a typical engineering office, there is usually a designated general administrator responsible for higher-level tasks such as creating directories, as well as editing or deleting projects. For all other users, it is appropriate to restrict these permissions. Implementing this permission structure ensures alignment with company best practice policies.
