**Software
Version 1.1**

1. Overview

BLKEXPORT is a desktop utility designed to process AutoCAD 2018 ASCII (*.dxf) DXF drawings and identify block insertions. The application categorises blocks into Anonymous Blocks, Non-Attributed Blocks, and Attributed Blocks, then allows the results to be exported to CSV files. It also provides a summarised BOM (Bill of Materials) export and full block schedule export.

2. Software Interface

Figure 1

The main window displays the selected DXF file, categorised block tabs, export options, and an integrity summary showing validation results.

3. Menu Commands

File Menu:

- Open DXF (Ctrl+O) – Open and process a AutoCAD 2018 ASCII (*.dxf) DXF drawing.
- Export to CSV (Ctrl+E) – Export full block schedule data.
- Export BOM to CSV (Ctrl+B) – Export a summarised BOM (Bill of Materials) .
- Exit (Ctrl+X) – Close the application.

Help Menu:

- About – Displays application version and registration information.

4. Loading a DXF File

1. Select File > Open AutoCAD 2018 ASCII (*.dxf) DXF or press Ctrl+O.
2. Browse to the required AutoCAD 2018 ASCII (*.dxf) DXF file.
3. The application processes the drawing and populates the block tables.
4. Review the Integrity Summary to confirm successful processing.

5. Block Categories

Anonymous Blocks – Displays anonymous block references detected in the drawing.

Non-Attributed Blocks – Lists blocks without attributes.

Attributed Blocks – Lists blocks containing attribute values.

6. Data Columns

Typical columns include:

- Handle – Unique entity handle.
- Insertion Coordinate – Block insertion point.
- Drawing Space – Model Space or Paper Space.
- Layout Name – Associated layout.
- Block Name – Name of the inserted block.
- Attribute Value – Attribute content when applicable.

7. Exporting Data

Export to CSV:

1. Load a AutoCAD 2018 ASCII (*.dxf) DXF file.
2. Click Export to CSV or press Ctrl+E.
3. Choose a save location.
4. Open the generated full block schedule CSV in Excel or another spreadsheet application.

Export BOM to CSV:

1. Click Export BOM to CSV or press Ctrl+B.
2. Select a destination folder.
3. Open the generated summarised BOM (Bill of Materials) CSV in Excel or another spreadsheet application.

8. Integrity Summary

The Integrity Summary section provides:

- Drawing name (dxf) and modification date.
- Total block count.
- Anonymous, attributed, and non-attributed block counts.
- LUPREC value used for coordinate precision.
- PASS/FAIL status confirming that detected block counts have been verified.

The About dialog displays version information, platform support, registration details, and access to system information.

10. Troubleshooting

No data displayed:

- Verify the selected file is a valid DXF.
- Ensure the drawing contains block insertions.

Export unavailable:

- Load and process a DXF file first.
- Verify you have write permission to the target folder.

Integrity check failure:

- Re-save the drawing as a supported AutoCAD 2018 ASCII (*.dxf) DXF format and reload it.

11. Keyboard Shortcuts

Ctrl+O – Open AutoCAD 2018 ASCII (*.dxf) DXF

Ctrl+E – Export to CSV

Ctrl+B – Export BOM to CSV

Ctrl+X – Exit

12. *Software Design Philosophy*

There is no AI in this application.

It has been built with reinforced concrete and steel—the way dependable software was built 20 years ago.

I haven't lost my way. I still believe that good software should have strong foundations. It should be predictable, dependable, and engineered to do its job every single day.

My focus has never been on following trends. It has always been on solving real problems with practical software that users can trust.

Like the structures designed by engineers, software should be built to last. It should do exactly what it was designed to do, consistently and reliably.

That philosophy has guided me throughout my career, and it continues to guide every application I build today.

I continue to build software you can rely on, day after day.

I am happy to share.
