Enola Record Unlock Viewer User Guide

June 2026

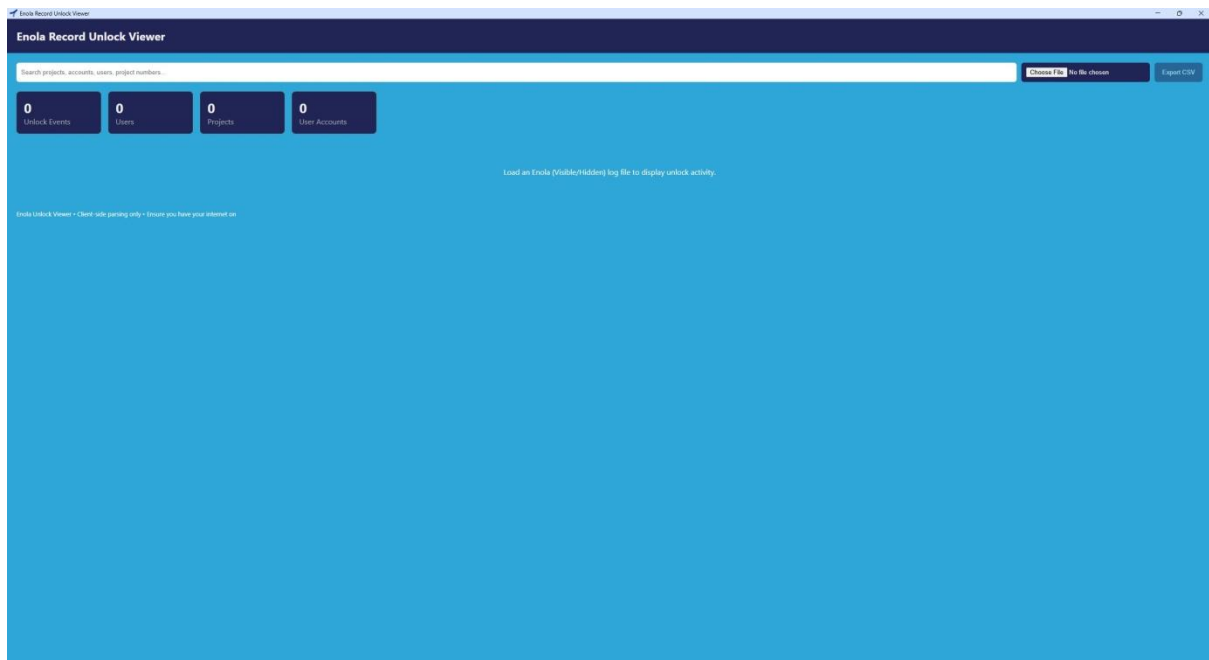

By David Egan

**Software
Version 1.0**

1. Overview

The Enola Record Unlock Viewer is a web-based tool for auditing and tracking unlock events for both Projects and User Accounts. It parses both Enola log files (Visible & Hidden) client-side and displays key metrics, timestamps, and responsible users in a clear dashboard format. No data is uploaded to a server. All processing happens in your browser. The Enola Record Unlock Viewer works in conjunction with Enola the record unlocking servers. Enola is the service layer and is the backend of the Project Navigator web application.

2. Interface Layout

The dashboard consists of 4 main sections:

2.1. Search & File Controls

Located at the top of the page:

- Search Bar: Filter results by project name, account, user, or project number.
- Choose File: Load a .log (Visible or Hidden) file for analysis. The current file name is displayed next to the button.
- Export CSV: Download the currently displayed unlock events as a CSV file.

2.2. Summary Cards

Four summary tiles show totals from the loaded log:

- Unlock Events: Total number of unlock actions.
- Users: Number of unique users who performed unlocks.
- Projects: Number of unique projects that were unlocked.

- User Accounts: Number of unique user accounts that were unlocked.

3. How to Use the Viewer

3.1. Loading a Log File

1. Click the "Choose File" button in the top-right corner.
2. Select your Enola .log file (Visible or Hidden) from your computer.
3. The viewer will automatically parse the file and populate the summary cards and tables.

Note: Files are processed locally. No data leaves your device.

3.2. Searching and Filtering

1. Click into the search bar at the top: "Search projects, accounts, users, project numbers..."
2. Type any keyword. The tables and summary cards update instantly to show only matching records.
3. Clear the search box to reset the view to all records.

3.3. Exporting Data

1. Load a log file and apply any search filters you need.
2. Click "Export CSV" in the top-right.
3. A CSV file containing the currently visible records will download to your computer. The CSV file will be downloaded to your download directory.

4. Understanding the Data

Each unlock event shows the full lifecycle of a lock:

- Locked On: Date and time the record was originally locked.
- Locked By: User who held the lock.
- Unlocked On: Date and time the record was released.

Use this to audit lock duration, identify frequent lockers, or troubleshoot access issues.

5. Troubleshooting

Issue	Solution
No data appears after choosing file	Ensure the file is a valid Enola .log (Visible or Hidden) file. Check that it contains unlock events.
Export CSV button does nothing	Check your browser's download settings. Ensure pop-ups/downloads are not blocked for localhost.
Search returns no results	Check spelling. Search is case-insensitive but matches exact substrings.

6. *Security & Privacy*

Enola Record Unlock Viewer uses client-side parsing only. Log files are read directly in your browser and are never transmitted over a network or stored on a server. You can safely use it with sensitive operational data.

For additional support, contact your system administrator.
